

Dungeon Architect Quick Start Guide

for Unreal Engine 4

1 Introduction

Dungeon Architect comes bundled with several examples to quickly get you started. The samples below use assets that are freely available (e.g. Infinity Blade's Assets) and some are built on other paid assets, which you can readily use if you have them already.

2 Download Content Pack

Download the Quick Start Content pack for Dungeon Architect version **1.x**

3 Plugin Installation (Manual)

If you have purchased the plugin from the Marketplace, install it from the Epic Launcher

If you have purchased it from the website, follow these steps:

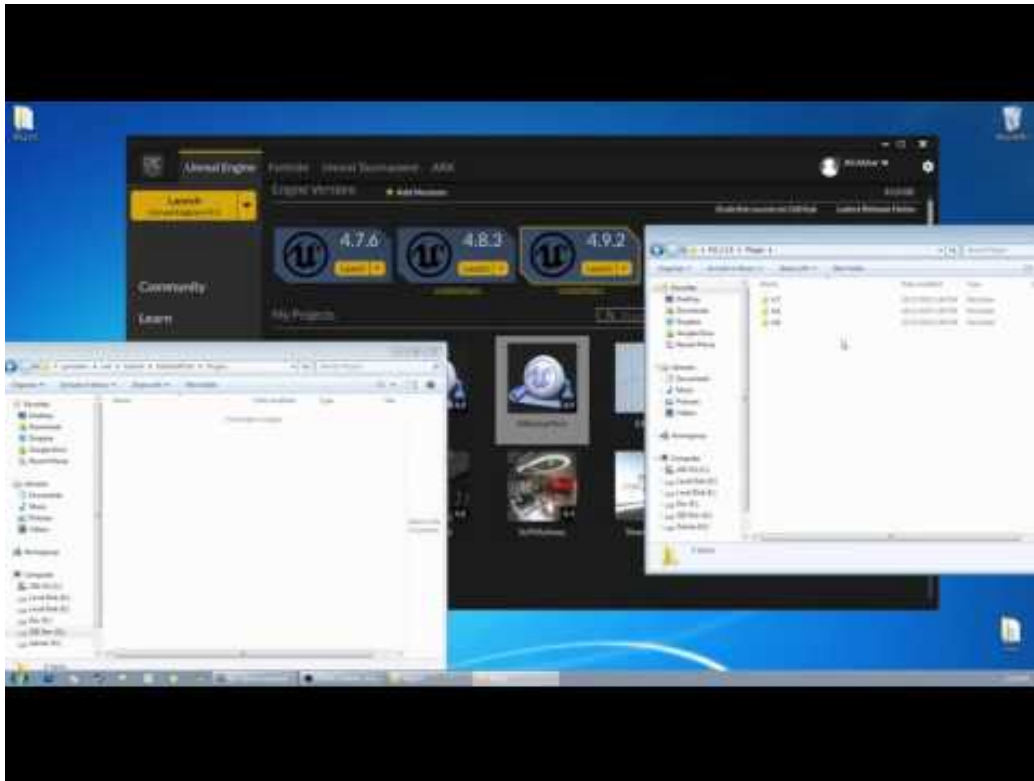

- Create a directory named Plugins in your game's root directory
- Extract the content of the downloaded plugin into the plugins directory. All major versions of UE4 are supported since 4.7. Choose the appropriate one to copy into

the Plugins folder

- Refer the User Guide for more info

Installation Video Tutorial

4 Build a dungeon (Design Time)

The plugin comes with sample assets and maps to get you started. Open the test map where everything is already setup

- Install Dungeon Architect plugin
- Download and extract the Quick Start Content Pack
- Copy the extracted Content/DA_StarterPack folder into your game's Content

Figure 1: Sample map

folder

- Open the sample map by navigating to Content > DA_StarterPack > Maps > DugeonDesignTime
- From the world outliner, click the Dungeon1 Actor.
- In the details panel, you will find 3 buttons in the Dungeon category. Click the “Build Dungeon” button. This will create a procedural dungeon in your scene using a sample theme you just extracted
- The config structure contains various parameters that can be tweaked to get different results

To build this setup yourself from scratch, refer the User Guide

5 Build a dungeon (Runtime)

Random dungeons can be created at runtime (e.g. during level load) using a random seed (some number) and various tweakable parameters and have the map populated with powerups, spawn points, NPCs etc. All this can be done using pure blueprints and this sample map shows you how to do it

- Install Dungeon Architect plugin
- Copy the extracted Content/DA_StarterPack folder into your game's Content folder
- Open the sample map by navigating to Content > DA_StarterPack > Maps > DungeonRuntime
- The scene is empty. Click the play button to have the procedural scene generated at runtime. A different level is generated on each run

Figure 2: Sample map

- Open the level blueprint to see how this is done

6 Level Authoring by Players (Runtime)

Dungeon Architect empowers not just your level designer, but also your players. This sample shows how you can have an in-game level editor and let your player design the layout of the levels. Most of the heavy lifting is done by the plugin. This game mode is designed entirely in blueprints.

- Install Dungeon Architect plugin
- Copy the extracted Content/DA_StarterPack folder into your game's Content folder
- Open the sample map by navigating to Content > DA_StarterPack > Maps > RuntimeLevelBuilder
- Do **not** build the dungeon. Just hit play

Figure 3: Sample map

Controls

- Use WASD to move around
- Hit space to enter / exit build mode
- In build mode, Left click to draw, right click to erase
- Use the mouse wheel to change level (height)

7 Infinity Blade: Fire Lands Theme (Hell Forge)

Generate beautiful cave like procedural levels using assets from Infinity Blade's Fire Lands asset pack

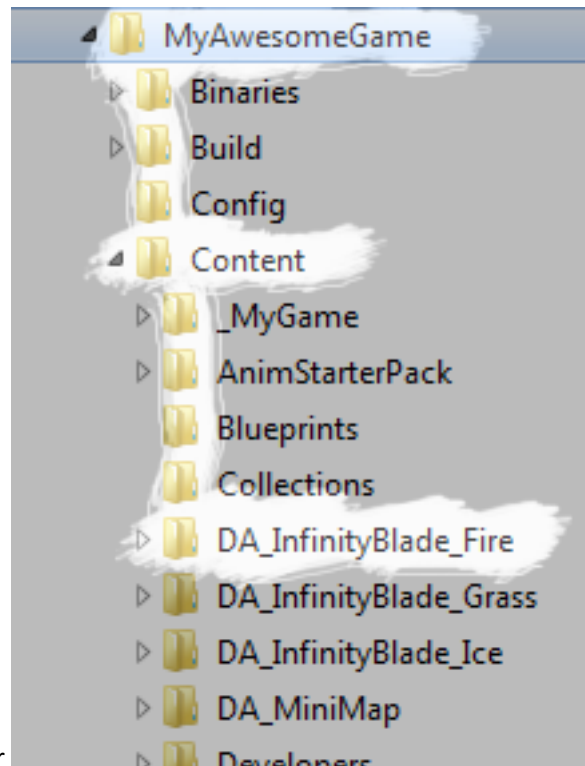

[View in Youtube](#)

- Create a new project (e.g Third Person)
- Install Dungeon Architect plugin
- Add the Infinity Blade Fire Lands pack in your game project
- Add the Infinity Blade Effects pack in your game project
- Copy the Content/DA_InfinityBlade_Fire folder into your game's Content

folder

- Explore the maps in the Content/DA_InfinityBlade_Fire/Maps folder

8 Infinity Blade: Ice Lands Theme (Frost Forge)

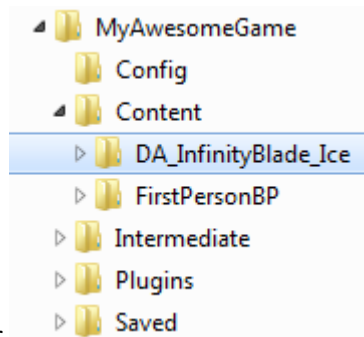

Generate beautiful procedural levels using assets from Infinity Blade's Ice Lands asset pack

[View in Youtube](#)

- Create a new project (e.g an Third Person)
- Install Dungeon Architect plugin
- Add the Infinity Blade Ice Lands pack in your Content folder
- Copy the Content/DA_InfinityBlade_Ice folder into your game's Content

folder

- Explore the maps in the Content/DA_InfinityBlade_Ice/Maps folder

9 Infinity Blade: Grass Lands Theme (Elven Gardens)

Generate beautiful procedural levels using assets from Infinity Blade's Grass Lands asset pack

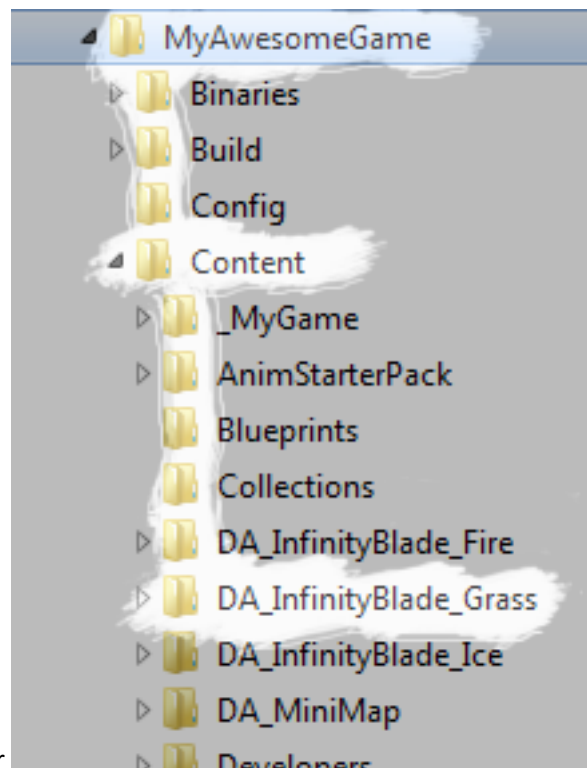

[View in Youtube](#)

- Create a new project (e.g an Third Person)
- Install Dungeon Architect plugin
- Add the Infinity Blade Grass Lands pack in your game project
- Add the Infinity Blade Effects pack in your game project
- Copy the Content/DA_InfinityBlade_Grass folder into your game's Content

folder

- Explore the maps in the Content/DA_InfinityBlade_Grass/Maps folder

10 Basic Top-Down Theme

The very basic theme created using simple shapes

[View in Youtube](#)

[View in Youtube](#)

- Create a new project (e.g a Top-down game)
- Install Dungeon Architect plugin
- Copy the Content/DA_TutorialGame folder into your game's Content folder
- Explore the maps in the Content/DA_TutorialGame/Maps folder

11 SciFi Theme

A set of theme files to generate sci-fi levels using the awesome SciFi Props Pack

[View in Youtube](#)

- Create a new project (e.g an FPS project)
- Install Dungeon Architect plugin
- Install the SciFi Props Pack to your project
- Copy the Content/DA_SciFi_Props folder into your game's Content folder

- Open the demo map Content/DA_SciFi_Props/Maps/SciFiMapDemo
- Select the Dungeon1 actor and click *Build Dungeon* from the Details window

12 Wooden Pier Theme

A theme file to generate levels using the awesome Modular Wooden Prop Pack

View in Youtube

- Install Dungeon Architect plugin
- Install the Modular Wooden Prop Pack to your project
- Copy the Content/DA_WoodenPier folder into your game's Content folder
- Explore the maps under Content/DA_WoodenPier/Maps

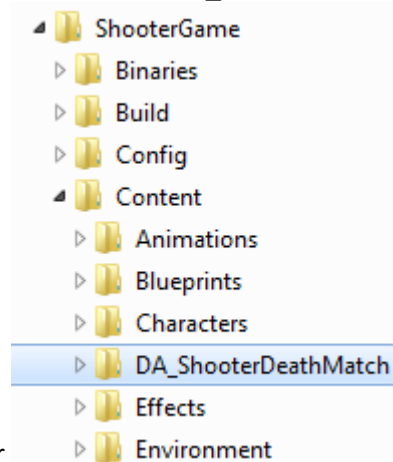

13 Procedural Deathmatch Map

Generate a random map at runtime with AI bots, powerups, spawn points etc scattered all over the map using only blueprints. This project is based on the ShooterGame demo, to reuse the bot assets

[View in Youtube](#)

- Create a new project based on the ShooterGame project
- Install Dungeon Architect plugin
- Add the SciFi Props Pack in your Content folder
- Enable dynamic nav mesh generation, so NPCs can move in our dynamically generated level. Navigate to Edit > Project Settings > Navigation Mesh > Runtime Generation. Set it to Dynamic
- Copy the Content/DA_ShooterDeathMatch folder into your game's Content

folder

- Open the demo map Content/DA_ShooterDeathMatch/Maps/DA_DeathMatchMap
- The map is empty, click Play. A procedural map is generated when the game starts with NPC bots spawned all over the map
- View the level blueprint on how this is done

14 SciFi Theme 2 (Manufactura K4)

A set of theme files to generate levels using the awesome Top-Down Sci Fi pack

[View in Youtube](#)

- Create a new project (e.g an FPS project)
- Install Dungeon Architect plugin
- Install Top-Down Sci-Fi pack to your project
- Copy the Content/DA_SciFi_K4 folder into your game's Content folder
- Top-Down Theme:
 - Open the demo map Content/DA_SciFi_K4/Maps/DATopDown
 - Select the Dungeon1 actor and click *Build Dungeon* from the Details window
- FPS Theme:
 - Open the demo map Content/DA_SciFi_K4/Maps/DAFPS
 - Select the Dungeon1 actor and click *Build Dungeon* from the Details window
- Oil Rig Theme:
 - Open the demo map Content/DA_SciFi_K4/Maps/DAOilRig
 - Select the Dungeon1 actor and click *Build Dungeon* from the Details window
- Tweak the parameters and rebuild for a different dungeon. Try painting the layout with the paint tool
